

How to Install the Secure Browser Through a Local Network – Windows

A special secure browser must be available on each computer to be used for HSA online testing. We strongly recommend that you install the secure browser on each computer to be used for testing. You can push the browser out to all computers through a network by copying browser files from the network to individual computers or through third-party programs to run the installers, such as Apple Remote Desktop.

This document provides network installation instructions for computers using the following supported Windows operating systems: Windows 2000, XP, Vista, and 7.

WINDOWS INSTALLATION

1. Install the browser on your server, following the standard directions available at <http://www.alohahsa.org/online/browsers/default.html>.
2. Identify the network directory to which you saved the browser file. These instructions will refer to that network directory as <X>.
3. Identify the target directory on the local user computers to which you would like to copy the browser file. These instructions will refer to that directory as <Y>. Make sure that you have write access to <Y> on the local computers. (*Note: Restricted users will have access only to certain folders on the local computers*).
4. Create a shortcut in the network directory by right-clicking on the **Kiosk_NoAdmin.exe** icon and selecting "Create Shortcut." Rename the new shortcut to "SecureBrowser3.0". (Note: In the shortcut Properties, the "Target" and "Start In" attributes will show the <X> network installation directory.)
5. Change the shortcut properties ("Target" and "Start In" attributes) to the local computers' <Y> directory instead of the default <X> network directory. That way the secure browser shortcut will now point to the User's designated Installation Directory <Y>.
6. Add the following lines to the login script for each user, replacing your actual local and source network directories for <Y> and <X>.

```
IF EXIST <Y> GOTO DONE
XCOPY "<X>" "<Y>" /E /I
COPY "<Y>\SecureBrowser3.0.lnk" "%USERPROFILE%\Desktop"
:DONE
EXIT
```
