

How to Install the Secure Browser without Administration Rights - Windows

A special secure browser must be available on each computer to be used for HSA online testing. We strongly recommend that you install the secure browser on each computer to be used for testing. Once you have installed the browser on one machine, you can simply copy it to restricted accounts on other machines if you do not have administrative rights.

1. On a computer on which you have installation rights, download and install the browser following the standard directions at <http://www.alohahsa.org/online/browsers/default.html>
2. Copy the entire folder where the browser was installed (usually, "C:\Program Files\HSASecureBrowser3.0") to a removable drive or shared network location.
3. Copy the entire directory from the shared location or removable drive to any directory on the target computer.
4. Drag the icon for **Kiosk_NoAdmin.exe** to the desktop to create a convenient shortcut.
